

COFFEE MACHINES

JUN, ONE, TWO ,THREE, & FOUR GROUP

No longer an exclusive Italian beverage, espresso and cappuccino is rapidly becoming the coffee drink of choice for coffee lovers around the world. To the discerning coffee drinker, any coffee will not do. There are a number of factors that effect the flavor of coffee. The beans are a vital part. However, without a good coffee machine to extract the aroma and flavor properly, and a good grinder to refine your beans, the best quality beans will not taste good at all.

In order to provide the best espresso coffee and cappuccino, our line of machines contain a microcomputer that oversees all operations and provides volumetric dosage of coffee. It also oversees the temperature of coffee exiting the machine, an integral variable for extracting optimal body and flavor from coffee beans. With certain models you can also program four (4) different coffee dosages and select them automatically. The grinders offered are available with matching colors. They are durable machines which provide many years of service. They come standard with a stepless micrometrical grinding adjustment.

All machines come standard with copper boiler and pipes, steel and stainless steel body, double gauge for boiler and pump pressure control. Optional features include: copper and brass body, steam cup warmer, cappuccino making device, and a bulk unit coffee making group. All machines come available in a multicolored scheme, red, copper, and brass.
